# VAANI AI

**Your Voice.
Your Words.
Every Language.**

VAANI is a multilingual personal voice studio that helps creators turn written scripts into spoken content in supported languages, using AI-powered speech synthesis.

Our vision: help creators grow beyond language boundaries while keeping a consistent, recognizable voice identity wherever verified custom voice capabilities are available.

## THE PROBLEM

### A creator's best work stops at the edge of their language.

- **Audiences go unreached.** Language keeps creators out of markets that would value their work.
- **Every language means another voiceover.** Each version adds time, effort and resources.
- **Voice artists add cost.** Hiring talent for every language complicates production.
- **Identity gets diluted.** A consistent voice is hard to keep across languages.
- **Distribution slows down.** Recreating content for each audience is inefficient.

## OUR SOLUTION

### One script. A simple path to spoken content in supported languages.

VAANI gives creators one studio to write a script, choose a language and voice, generate speech, and keep every file in a personal library. Creators work with the languages verified and supported by the AI provider.

**Custom voice, stated plainly:** a creator can use their enrolled voice identity for multilingual synthesis only where the provider's complete voice enrollment and cross-language capabilities have been verified. A standard synthetic voice is never presented as a cloned personal voice.

## HOW IT WORKS

**01**
**Write or Upload Your Script**
Enter or paste your content into VAANI's Speech Studio.

**02**
**Choose Your Language**
Choose from languages verified and supported by the AI provider.

**03**
**Select Voice Mode**
Standard synthetic voice, or verified custom voice where enrollment is supported.

**04**
**Generate Speech**
AI-powered text-to-speech turns your script into natural speech.

**05**
**Listen and Download**
Preview, play, save and download the generated audio.

**06**
**Manage Your Content**
Revisit past audio in your personal audio library.

## BUILT FOR CREATORS

**YouTube Creators**
Voiceovers for audiences in different supported languages.

**Short-Form Creators**
Multilingual audio for reels, shorts and educational videos.

**Educational Creators**
Learning material that reaches audiences who prefer other languages.

**Podcasters**
Explore multilingual audio versions of scripts and episodes.

**Independent Creators**
Less dependence on a separate recording workflow for every supported language.

## WHY IT MATTERS

**Wider Audience Reach**
Make content accessible across language boundaries.

**Time Efficiency**
Simplify how multilingual speech is generated.

**Voice Consistency**
Support a recognizable creator voice through verified custom voice workflows.

**Content Scalability**
Repurpose written scripts into audio for multiple audiences.

## MORE THAN TEXT-TO-SPEECH

— Multilingual speech generation
— Personal voice identity through verified custom voice capabilities
— A simple script-to-audio workflow
— A personal library for generated content

**Language accessibility, voice identity and creator-focused usability, in one studio.**

## "Your content should never be limited by the language you speak."
